Bjerknes Centre for Climate Research

SHMIP splinter Meeting
Feedbacks and Outlook

Basile de Fleurian, Mauro A. Werder

EGU general assembly , Vienna, 28 April 2017

Bjerknes Centre for Climate Research

Good response to the experiment

- Good response in terms of the number of model represented
  12 Models participated with different physics and dimensions
- Response from the inner and outer comunity is good as far as we heard.

Users feedbacks

- What was the workload to produce these data?
  - Do you feel the workload was too big and do you have solutions to reduce it?
  - Will you be able to provide new variables if they become needed?
- How clear
  - Are the explanation (current) clear enough or do you see more work to be done.
- Presentation
  - Is there result presentation that you would have like to see
- Other

Outlooks

- Deadline extension
  End of August, feedbaks as we look at the data in september
- publication writting
  Plan is to submit before the end of the year, with potential presentation at AGU
- web site development
  - Are there things that should be added
  - Add model results to the setup under CC
- future plans
  - Should we start thinking about a folow-up and what kind
  - If data based are you aware of some complete dataset that would be available (Arolla,Russel,Gorner,Bench...)
